Airborne Use of Force (AUF)

Mission Need: Determine appropriate weapon and ammunition combination to disable non-compliant vessel engines and minimize collateral damage during AUF engagements.

Project Objectives:
* Use computational modeling, limited static and dynamic testing to parameterize secondary effects of various round types when used against representative-sized outboard motors (~75 horsepower and ~200 horsepower) while employing current U.S. Coast Guard (CG) AUF/counter drug techniques, tactics, and procedures.

Completed
U.S. Coast Guard Rotary Wing Covert Study

Mission Need: Improve covert Tactics, Techniques, and Procedures (TTP) for rotary wing aircraft.

**Project Objectives:**

- Provide the U.S. Coast Guard (CG) rotary wing aviation community with data that documents the recommended TTPs for conducting covert surveillance.
- Determine lateral and vertical distances for the H-65 and H-60 to remain covert from potential targets in the maritime environment.
- Assist Command, Control, Communications, Computer, Intelligence, Surveillance, and Reconnaissance community with better understanding for future remote sensor acquisitions that allow for well-defined covert standoff distances.

**Key Milestone / Deliverable Schedule:**

Project Start: 1 Oct 18
Define/Limit Target Vessel Parameters: 17 Dec 18
Data Collection: 28 Apr 19
Aircraft Characteristics Modeling and Simulation: 30 Aug 19
Execute Operational Field Test: 22 Nov 19
**U.S. Coast Guard Rotary Wing Covert Study (Report & Brief):** 26 Jun 20
Project End: 26 Jun 20

**Sponsor:** CG-SAR, FORCECOM, AREA-3, ALC Vibrations Group

**Stakeholder(s):**

- CG-711
- Influence Tactics, Techniques, & Procedures

**Project #:** 5601
**Anticipated Transition:** Knowledge Product

**Notes:**

- Leverage prior work on CG Research and Development Center Project 8307: Coast Guard Fixed Wing Covert Study.
- KC-130J Aural Detection Information Paper and C-130H Study available as background.

**RDC Research Lead:** Ms. Meg Tusia
**CG-926 Domain Lead:** Mr. Scott Craig

## Autonomous Surface-Search Sensor for Manned Aircraft

### Mission Need:
Greater efficiency and effectiveness of searches conducted by airborne assets.

### Project Objectives:
- Update market research on autonomous sensor systems for maritime search.
- Determine the potential for autonomous surface-search sensor integration on U.S. Coast Guard (CG) rotary wing assets.
- Expand the CG’s existing autonomous sensor performance data set.
- Model the impact of executing search missions with an autonomous sensor package.

Incorporating Sensor Performance in SAROPS

Mission Need: Time and cost effective methodology to incorporate sensor capabilities in the Search and Rescue Optimal Planning System (SAROPS).

Project Objectives:
• Research and document the SAROPS data requirements related to sensor inputs.
• Determine sensitivity of SAROPS search metrics to inputs.
• Identify a resource-effective approach to develop the sensor-specific data required for use in SAROPS.
• Create a prototype of this new approach for developing the sensor-specific data.

Key Milestone / Deliverable Schedule:
Project Start…………………………………………………….. 2 Oct 17 ✓
Completion of Work Under Original Project Scope……………… 13 Mar 19 ✓
Project Re-scoped and Retitled …………………………………… 11 Jul 19 ✓
Required SAROPS Input to Develop Sweep Width (Brief)………15 Dec 19 ✓
Key Decision Point…………………………………………………… 16 Dec 19 ✓
Conduct Sensitivity Analysis & Investigate Underlying Assumptions…. Sep 20
SAROPS Sensitivity Analysis (Brief)……………………………… Oct 20
Research Novel Methods to Develop Sensor-Specific Data ………… Apr 21
Incorporating Sensor Performance in SAROPS (Brief)…………… Jun 21
Prototype Tool for Incorporating Sensor Performance in SAROPS (Prototype) ……………………………………… Dec 21
Incorporating Sensor Performance in SAROPS (Report)………… Feb 22
Project End…………………………………………………………….. Feb 22

Sponsor: CG-SAR
Stakeholder(s): LANT, PAC, FORCENCOM, D1, D7, D9, D11, D13, Boat Forces
Project #: Anticipated Transition: Knowledge Product
7937 Influence Tactics, Techniques, & Procedures

Notes:
• Leverages U.S. Coast Guard Research and Development Center’s previous work with developing SAROPS sensor inputs.

RDC Research Lead: Ms. Grace Python
CG-926 Domain Lead: Mr. Scott Craig

For more information, call (860) 271-2600 or e-mail RDC-Info@uscg.mil

Indicates RDC product.
Airborne Counter Unmanned Aircraft Systems (C-UAS)

Mission Need: Technology and tactics to secure airspace from small Unmanned Aircraft Systems (sUAS).

Project Objectives:
- Characterize the aviation mission for countering sUAS threats.
- Benchmark ground-based C-UAS solutions and determine the potential for transition to airborne platforms.
- Investigate robust airborne detection, tracking, classification, and identification for airborne assets.
  - Generate a prototype Technical Data Package (TDP) for an airborne C-UAS system.
  - Fabricate and integrate a minimally invasive C-UAS demonstration prototype.
- Conduct prototype test and evaluation to assess functional characteristics.

Key Milestone / Deliverable Schedule:
- Project Start: 1 Oct 19
- Rotary Wing Air Intercept (RWAI) Airborne Counter Unmanned Aircraft System (ACUAS) – System Concept (Brief): 25 Jun 20
- Airborne C-UAS Test and Evaluation: Sep 21
- RWAI C-UAS Prototype System TDP and Specification (Report): Mar 22
- Project End: Mar 22

Sponsor: CG-711
Stakeholder(s): CG-41, CG-711, CG-26, CG-6, CG-5R, ALC

Anticipated Transition: Knowledge Product
Future Technology

Notes:
- This effort will leverage partnerships with the U.S. Department of Homeland Security Science and Technology Directorate, Air Force Research Laboratory, Naval Air Systems Command, and other government organizations.

RDC Research Lead: Mr. Evan Gross
CG-926 Domain Lead: Mr. Scott Craig

# Beyond Visual Line of Sight (BVLOS) Technology for Coast Guard (CG) Unmanned Aircraft System (UAS) Operations

**Mission Need:** BVLOS operations for CG UAS.

## Project Objectives:
- Leverage U.S. Southern Command (SOUTHCOM) efforts to explore Vertical Takeoff and Landing (VTOL) operations from a CG Cutter (CGC).
- Establish evaluation team for Detect and Avoid (DAA) technologies.
- Submit a Request for Information (RFI) for DAA technologies to assist BVLOS operations.
- Integrate DAA technologies for conducting BVLOS operations [sUAS 1st].
- Conduct land and vessel based evaluations using DAA technology [sUAS 1st].
- Incorporate DAA technology into VTOL platform.
- Conduct a VTOL BVLOS Limited User Evaluation from a CGC.
- Inform due regard parameters for CG BVLOS UAS operations.
- Establish a BVLOS Certificate of Authorization for Coast Guard operations.

## Key Milestone / Deliverable Schedule:

Cell Phone Location for Search and Rescue

Mission Need: Cell phone technology to support the precise geo-location of distressed mariners in mayday and Search and Rescue (SAR) scenarios.

**Project Objectives:**
- Conduct market research, identify, and assess state of the market Commercial/Government off the Shelf (COTS/GOTS) geo-locating system(s).
- Evaluate COTS/GOTS solutions on land and at sea to identify possible enterprise solutions.
- Inform functional requirements and Tactics, Techniques and Procedures (TTP) for cell phone geo-location methods.
- Without distracting from the necessity of carrying VHF-FM equipment, contribute to an awareness campaign educating mariners to provide cell phone numbers in float plans, place cell phones in waterproof sleeves, and carry onboard solar cell phone chargers to extend mobile battery life.

**Key Milestone / Deliverable Schedule:**

Enhanced Person in the Water (PIW) Detection

Mission Need: Maximize the effectiveness of air and surface asset searches for PIW.

Project Objectives:

• Solicit general public through prize competition for modifications/enhancements to flotation devices that increase conspicuity and improve detection probability. Potential benefits include:
  – Increase conspicuity of PIW and small targets in an open water environment using existing U.S. Coast Guard assets.
  – Decrease the time required to search a given open water area in various sea-state and weather conditions.
  – Reduce the burden on air and surface asset sensor operators.
• Perform limited user field evaluations of selected technology.

Key Milestone / Deliverable Schedule:

<table>

Countering GPS Interference

Mission Need: Develop a means to detect, localize, alert, and mitigate sources of Global Positioning System (GPS) interference in the maritime domain.

Project Objectives:

- Develop wide area GPS interference detection based on existing networks of GPS receivers such as Nationwide Automatic Identification System.
- Investigate GPS interference mitigation technologies to counter effects aboard U.S. Coast Guard (CG) vessels. Investigate tactical GPS interference detection capability for CG units to operate to find GPS interference sources.
- Develop notification methods for maritime users via marine safety information methods such as broadcast notice to mariners, Automatic Identification System application specific messages, and navigation data.

Key Milestone / Deliverable Schedule:

<table>

Intelligence, Surveillance and Reconnaissance (ISR) Enterprise Data Network Study and Analysis

Mission Need: Enable intelligence-driven operations and collaboration for continued decision advantage in support of all U.S. Coast Guard (CG) missions.

Project Objectives:

• Establish the necessary cross-component Joint Requirements Council (JRC) chartered team to support the development and deployment of a U.S. Department of Homeland Security (DHS) enterprise ISR data network solution.
• Support all need validation analyses and mission need objectives to successfully obtain Acquisition Decision Event (ADE) 0 and 1 approvals.
• Perform technology demonstrations (shore, surface, air) as needed to inform mission need documentation deliverables.
• Specifically focus on cyber security related requirements as solution alternatives are analyzed.
• Support development of requisite CG resource proposals.
• Ensure the smooth transition into the Analyze/Select phase of the Acquisition Lifecycle Framework.

Key Milestone / Deliverable Schedule:

| Project Start | 14 Jun 17 ✓ |
| Standup ISR Enterprise Data Network Integrated Product Team | 24 Nov 17 ✓ |
| Capability Analysis Study Plan Tactical DHS ISR Data Network | 20 Dec 17 ✓ |
| Start Technology Demonstration(s) to Inform Mission Need | 6 Jun 19 ✓ |
| ISR Enterprise Data Network Concept of Operations (CONOP) Draft delivered to sponsor | 25 Feb 20 ✓ |
| ISR Enterprise Data Network Capability Analysis Report (CAR) | 23 Mar 20 ✓ |
| ISR Enterprise Data Network Mission Needs Statement (MNS) | 12 May 20 ✓ |
| DHS Tactical ISR Network: Project Summary (Report) | Jul 20 ✓ |

Cybersecurity Vulnerabilities, Threats, and Risk Mitigation Strategies for Coast Guard Surface and Air Assets

Mission Need: U.S. Coast Guard (CG) platforms require resistance and resilience to cyber attacks.

**Project Objectives:**

- Conduct cyber security risk research analysis for Global Positioning System (GPS), Automatic Identification System (AIS) and specific mission oriented systems dependent on position, navigation and timing.
- Partner with the U.S. Department of Homeland Security Science and Technology Directorate to test specific equipment vulnerabilities and derive the impact and consequence of attacks to identify defense strategies.
- Perform a cyber assessment on a CG asset to identify vulnerabilities, threats and risk mitigation strategies.
- Develop and test a cyber risk mitigation strategy that could be used to recover compromised operational technology systems on CG surface and air assets.

Maritime Counter Unmanned Aircraft Systems (C-UAS)

Mission Need: Methods to detect, track, identify, and defeat illicit use of unmanned aircraft systems in the maritime environment.

**Project Objectives:**

- Inform requirements for C-UAS for the U.S. Coast Guard (CG) Ports, Waterways, and Coastal Security and Defense Readiness missions.
- Conduct market research to identify both government off-the-shelf and commercial off-the-shelf technologies that satisfy CG requirements.
- Evaluate system prototypes in an operational maritime environment.
- Integrate successful systems to build an end-to-end layered defensive system prototype, aimed at increasing performance and usability while reducing size, weight and power and manning requirements.
- Provide C-UAS system subject matter expertise in development of tactics, techniques, and procedures for CONUS and OCONUS applications.

Redefine Field Intelligence Reporting and Analysis

Mission Need: Improved information dominance in the maritime domain.

**Project Objectives:**

- Research cutting edge human language tools, artificial intelligence, machine learning and other analytical tools that can help to automate analysis of field intelligence reports.
- Comprehensively assess intelligence reporting and analyze evaluation processes/constraints within tactical units and intelligence production centers.
- Research government cloud technology that will holistically enable the conditions for shorter feedback loops with relevant, timely, and predictive intelligence for CG decision makers.

Performance of Daytime Distress Signals

Mission Need: Determine effectiveness of existing daytime distress signals.

Project Objectives:
- Provide the Office of Design and Engineering Standards empirically-derived information to update distress signal carriage requirements.
- Determine effectiveness of presently-approved daytime distress signals.
- Determine if an enhanced, 2-color, quick-flashing SOS electronic visual distress signal will be effective in daytime.
- Determine if project results can apply to Safety of Life at Sea (SOLAS) guidelines.

Key Milestone / Deliverable Schedule:

- Project Start: 2 Apr 18
- Pilot Testing: 29 Aug 18
- Field Experiment: 7 Nov 18
- Key Decision Point: SOLAS Equivalence: 28 Feb 19
- Daytime Distress Signal Effectiveness: 5 Dec 19
- Project End: 5 Dec 19

Vessel of Opportunity Skimming System (VOSS) Technology Market Research

Mission Need: State-of-the-market, logistically supportable VOSS technology.

**Project Objectives:**

- Research state-of-the-market technologies that can potentially replace the current VOSS equipment.
- Ensure VOSS technologies will be operable in D14/D17 Areas of Responsibility (AOR).
- Compile a report for possible future actions related to VOSS equipment replacement.

Advancing UAS and AUV Capabilities to Characterize Water Column and Surface Oil in Ice Environments

Mission Need: Technologies to detect and characterize oil spills in ice environments.

**Project Objectives:**

- Coordinate and conduct multi-agency lab and field tests to gain better understanding of aerial and underwater sensor capability in characterizing oil on the surface or in the water column in ice conditions.
- Determine remote vehicle telemetry capability to transfer sensor data to on-scene responders or Incident Command as actionable information.

**Key Milestone / Deliverable Schedule:**

- Project Start: 23 Jan 20
- Developed Interagency Reimbursable Work Agreement with National Oceanic and Atmospheric Administration (NOAA): 3 Jun 20
- Phase 1: UAS/AUV Tests at Cold Regions Research and Engineering Laboratory (CRREL) Completed: Nov 20
- Laboratory Results and Way Ahead (Brief): Jan 21
- Field Exercise Planning Completed: Feb 21
- Phase 2: UAS/AUV Systems Field Testing in Great Lakes or Arctic Completed: Feb 21
- UAS/AUV Lab Experiments Results (Report): Mar 21
- Data Schema for Data Stream Export Completed: May 21
- UAS/AUV Systems Field Exercise Integration (Report): Sep 21
- Project End: Sep 21

Survival Modeling, Reporting, and Statistics

Mission Need: Improve SAROPS utility by incorporating better survival modeling and statistics.

**Project Objectives:**

- Improve Search and Rescue survival decision tools by incorporating methods that better account for survival time in warmer water (15°C (59°F)) and incorporate survival factors beyond heat production and heat loss.
- Develop a "dynamic" data base to validate model(s) against statistics, and permit model "fine-tuning" as the data base grows.
- Provide the Search and Rescue program an easily-integrated survival module that allows two-way compatibility with existing SAROPS processes.

**Key Milestone / Deliverable Schedule:**

In-Situ Burn (ISB) Research

Mission Need: Improve ISB techniques, technology and monitoring to make ISB a more effective, practical and safe option for oil spill response.

Project Objectives:

- Determine best practices for operational use of ISB.
- Conduct literature review to investigate remote air-monitoring technologies.
- Develop and test procedures to support freshwater ISB of heavy oils with and without contaminated vegetation.
- Conduct air quality monitoring of smoke plumes during ISB field tests and compare with SMART protocol.
- Report results for reference by U.S. Coast Guard (CG) federal on-scene coordinators, regional response teams, agency partners, academia, national labs, and international stakeholders that addresses ability of technology to improve responder safety and increase sampling accuracy.

# Next Generation Aids to Navigation Buoys & Alternative Moorings

**Mission Need:** Reduce U.S. Coast Guard (CG) Aids to Navigation (AtoN) buoy costs, increase buoy reliability and longevity, and moor buoys in an environmentally friendly way.

## Project Objectives:

- Perform market study and document existing buoy types and specifications:
  - Consider hard shell plastic, fiberglass and different-shape buoys.
  - Develop a catalog for continued CG use.
- Develop standardized stretch hose mooring technology for all coastal buoy environments.
- Perform field test to determine optimal buoy replacement & mooring options:
  - Obtain the most promising buoys/moorings for exposed, semi-exposed, protected, river, and ice.
  - Deploy each type in proper environment, evaluate performance & document.
  - Provide functional characteristics for next generation buoys.

Ballast Water Management (BWM) Research and Development

Mission Need: Reduce Nonindigenous Invasive Species (NIS) transport risks by commercial vessels in U.S. waters, including the Great Lakes (GL).

**Project Objectives:**
- Determine the most practical BWM practices for Laker operators to reduce the risks of transporting NIS from one region of the GL to another when they are introduced from the outside by ocean-going ships.
- Research and develop robust, science-based technical Quality Assurance (QA) protocols to validate sub-Independent Lab (IL) QA/Quality Control shipboard test programs that support BWM System Type Approval (TA).
- Determine the availability and capabilities of existing technologies that field inspectors could use to verify compliance with the Ballast Water Discharge Standard (BWDS).
- Analyze the CG BWM Program impacts on GL invasion rates.

**Key Milestone / Deliverable Schedule:**

CG Nearshore Use of FirstNet

Mission Need: Interoperable voice and high speed data communications among Sector Forces and First Responders within Sea Area A1 (within 20 nautical miles of shore).

**Project Objectives:**

- Leverage a Cooperative Research and Development Agreement (CRADA) to investigate U.S. Coast Guard (CG) operational use of the National Public Safety Broadband Network (commonly called FirstNet).
- Assess the feasibility and effectiveness of leveraging CG infrastructure (e.g., Rescue 21 towers) to enhance FirstNet designs.
- Adapt 4G/LTE technology for the maritime environment to best support the CG, public safety, U.S. Department of Defense, and Other Government Agencies within 20 nautical miles of shore.

  *Phase 1:* Deploy handsets, FirstNet Enhanced Push To Talk (EPTT), blue force tracking, and Geosuite.
  
  *Phase 2:* Optimize radio access network, FirstNet integrated dispatch console, and EPTT enhanced equipment.
  
  *Phase 3:* Deploy Band 14 vessel routers.

**Key Milestone / Deliverable Schedule:**

- **Project Start:** 1 Mar 18
- **Limited User Evaluation Start:** 1 Feb 19
- **CG FirstNet Maritime Test Range: Phase 1:** 1 Feb 19
- **CG FirstNet Maritime Test Range: Phase 2:** 19 Aug 19
- **Coast Guard Nearshore Use of FirstNet (Brief):** 22 Nov 19
- **CG FirstNet Maritime Test Range: Phase 3:** 31 Jan 20
- **Sector Key West Full Scale Exercise:** 11 Mar 20
- **Limited User Evaluation:** 31 Mar 20

- **Coast Guard Nearshore Use of FirstNet:**
  
  **Test Results and Recommendations (Report):** Jul 20
  
  **Project End:** Jul 20

Evaluation of Potential CG Use of CubeSats

Mission Need: Investigation and assessment of the operational utility of CubeSat technology for U.S. Coast Guard (CG) missions.

**Project Objectives:**

- Develop and deploy two ground stations for the Mobile CubeSat Command and Control (MC3) ground network, test and document the performance of the MC3 ground stations.
- Participate/partner in CubeSat technology development, test and document CubeSat performance during on-orbit test and evaluation of Polar Scout.
- Perform a CubeSat payload mission assessment that includes CubeSat concept of operations scenarios that would support CG mission needs and influence CubeSat requirements.
- Prepare a CubeSat technology roadmap to support the most pressing CG mission needs, including development, deployment and operations and maintenance planning factors.

**Key Milestone / Deliverable Schedule:**

Iceberg Detection and Information Dissemination Methods

Mission Need: Improve quality of iceberg detection using satellite images and improve customer information dissemination.

Project Objectives:
- Research product dissemination methodologies for current International Ice Patrol (IIP) Iceberg Limit product.
- Improve current dissemination and shape requirements/limitations for future products.
- Develop additional products which provide more information to the maritime public regarding navigation risks posed by icebergs.
- Act as the U.S. Coast Guard (CG) Research and Development Center (RDC) liaison to the Department of Homeland Security (DHS) Science and Technology Directorate (S&T) Iceberg Tagging effort.
- Develop understanding of the application of machine learning to iceberg detection in Sentinel 1 satellite images.

Evaluate Network Accelerator Technology to Improve Cutter Information Technology (IT) Performance

Mission Need: Hardware and software solutions to improve cutter IT performance.

Project Objectives:
- Review background issues and previous/current U.S. Coast Guard (CG) efforts to document and improve cutter IT application performance.
- Evaluate commercially available equipment that could improve network performance in a degraded, or high-latency environment.
- Perform limited user evaluation of selected equipment on an afloat unit.
- Investigate best practices, including transition to the cloud, to improve IT performance in a degraded, disconnected and high latency environment.
- Perform market research for CG database presentation tools to potentially support next generation Enterprise Service Bus (ESB).
- Make recommendations to sponsor and stakeholders about ways to most improve cutter IT application performance.

Key Milestone / Deliverable Schedule:

Project Start……………………………………………………………….. 1 Oct 19 ✔
Review of CG Previous/Current Efforts ......................... 31 Dec 19 ✔
Evaluate Network Accelerator Technology ................. 28 Feb 20 ✔
Limited User Evaluation of Selected Equipment ............ Jul 20
Network Accelerator Tech Evaluation (Brief) .......... Oct 20
Investigate Best Practices for Software ................. Mar 21
Perform Market Research for Next Generation ESB ...... May 21
Improve Cutter IT Application Performance (Report) .... Jul 21
Project End……………………………………………………………….. Jul 21

Sponsor: CG-68
Stakeholder(s): CG-761, C4IT SC, CG-67, CGCYBER

Project #: 8702
Anticipated Transition: Knowledge Product
Acquisition Milestone Support

Notes:
- Obtained approved and signed Cooperative Research and Development Agreement with Swisgh Data Inc for commercial technology testing aboard USCG Cutters.
- Acquire support with testing aboard the NSC Hamilton (WMSL-418), and the FRC Nathan Bruckenthal (FRC-154).

Automatic Identification System (AIS) Cyber Security

Mission Need: Improve mariner safety by hardening the AIS against cyber attacks.

Project Objectives:

• Investigate existing national and international cryptography research for data message authentication.
• Investigate previous signal bit-level research on extending AIS range to possibly address cybersecurity through signal verification of radio frequency information (AIS 2.0).
• Research Nationwide AIS data machine learning implementations that could augment AIS monitoring and alerting.
• Trial and demonstrate promising efforts.
• Report results and recommendations to support future implementation.

Key Milestone / Deliverable Schedule:

Project Start................................................................. 1 Oct 19 ✓
Research Encryption Methods Proposed Internationally..........30 Jun 20 ✓
AIS 2.0 Capability Demonstration ..................................... Aug 20
AIS Machine Learning Analysis ...................................... Sep 20
★★ AIS Data Authentication (Brief)............................... Oct 20
Lab Demonstration of AIS Cyber Attack Defense & Mitigation…. Oct 20
★★ AIS Signal Verification (Brief).................................. Jan 21
★★ AIS Machine Learning (Brief).................................... Jun 21
★★ AIS Cyber Security (Report)..................................... Sep 21
Project End...................................................................... Sep 21

Sponsor: CG-761
Stakeholder(s): CG-68, CGCYBER, CG-761, CG-NAV, ICC, MIFCLANT/PAC, CGA

Project #: 8701
Anticipated Transition: Knowledge Product

Notes:
• Possible partnership with Naval Postgraduate School.
• Leverage RDC Project 2218, Countering GPS Interference, and Project 6211, Next Generation Arctic Navigational Safety Information System.

RDC Research Lead: Mr. Jay Spalding
CG-926 Domain Lead: Ms. Holly Wendelin

Radio Frequency (RF) Communications in a Cloud Environment

Mission Need: RF communications capabilities as virtualized services in a cloud environment.

**Project Objectives:**

- Satisfy existing RF Comms requirements by leveraging CG network infrastructure along with Coast Guard One View (CG1V) and approved Cloud Access Points.
- Investigate the cloud service, architecture, and implementation that provides the best solution for replacing existing RF Comms components in the Rescue 21 (R21) system.
- Replace existing backend server components currently deployed at R21 Remote Fixed Facilities and Sector Command Centers with cloud-based capabilities and perform system demonstration (Phase 1).
- Replace existing R21 user console with cloud-based web accessible interface and perform system demonstration (Phase 2).
- Assess operational improvements and make NextGen R21 recommendations.

## Extended Reality (XR) Capabilities for Coast Guard Mission Support

**Mission Need:** Improve the efficiency and effectiveness of maintenance and training across all U.S. Coast Guard (CG) communities.

### Project Objectives:
- Identify maintenance, training, tools, processes, and procedures used by military and industry that will enhance the CG’s ability to train personnel and perform maintenance on CG assets with the following goals:
  - Reduce the labor burden of technicians by providing current maintenance information via XR technologies.
  - Increase the availability of assets by improving the efficiency of maintenance and reducing costly errors.
  - Improve the effectiveness of training and reduce the time to train personnel.
- Create a roadmap that will enable sponsor to generate requirements and successfully implement extended reality capabilities throughout the CG to improve the performance of mission support services.

### Key Milestone / Deliverable Schedule:

**Evaluation and Testing of VHF Data Exchange System (VDES) Impacts on the Automatic Identification System (AIS)**

**Mission Need:** Determine VDES benefits and path to implementation to support U.S. Coast Guard (CG) operations.

---

**Project Objectives:**
- Develop a technology roadmap for use of VDES:
  - Perform literature review, investigate the maturity of standards, market research of VDES equipment, analyze findings from worldwide VDES field trials, and identify steps for CG implementation.
  - Phase 1 – VDES limited user evaluation to develop a transition plan to:
    - Shift CG tactical data transmissions from AIS channels to proposed frequencies for application specific message channels.
  - Phase 2 – VDES limited user evaluation to:
    - Evaluate usage of different VDES channels to support various data types.
    - Investigate operational needs to support shore-side management of VDES.
    - Perform system level testing for frequency interference, limits to system overloads, message reception rates, out-of-bound interference, etc.

Risk Based Cruise Ship Safety Score

Mission Need: Improve cruise ship risk assessments through a risk assessment score based on a vessel’s exam results.

Project Objectives:
- Evaluate current practices to determine a cruise ship’s risk for a safety or security incident.
- Working with subject matter experts, evaluate deficiencies (risk and/or consequence) and appropriately categorize deficiencies and assign appropriate weights.
- Develop a prototype, an automated method, to determine a cruise ship’s risk assessment via its deficiency exam results and corresponding deficiency category weights.
- Receive feedback from industry on the effectiveness of the prototype’s outputs.

Key Milestone / Deliverable Schedule:

<table>
<thead>
<tr>
<th>Project Start</th>
<th>Analysis of Current Practices in Place</th>

Exploring Machine Learning (ML) for Application In USCG Mission Planning & Disaster Response

Mission Need: Improve the U.S. Coast Guard’s (CG) emergency preparedness and increase response effectiveness.

Project Objectives:

- **Phase I:**
  - Literature research and review: application of Artificial Intelligence (AI) and ML to CG Humanitarian Assistance and Disaster Response (HA/DR).
  - Assess how the use of AI/ML could enhance the efficiency of CG planning and response process during a crisis.

- **Phase II:**
  - Naval Postgraduate School conducts ML digital image change detection research.
  - University of Illinois (U of I) conducts ML HA/DR network analysis and natural language processing of the 2010 Haiti earthquake response.

Key Milestone / Deliverable Schedule:

- **Project Start**
  - 20 Oct 17

- **Phase I - Conduct Literature Review and Assessment**
  - 30 Apr 18

- **Initiate Phase II**
  - 30 Apr 19

- **Change Detection of Marine Environments Using Machine Learning (Naval Postgraduate School)**
  - Thesis A: 31 Jan 20
  - Thesis B: Jul 20

- **U of I Natural Language Processing**

Research into Navigational Safety Risk Modeling and Analysis Tool

Mission Need: Capability to fully characterize the impact of rerouting traffic, funneling traffic, and placement of offshore structures in terms of risk.

**Project Objectives:**

- Analytical modeling process and analysis tools to predict changes in traffic patterns and determine the resultant changes in navigational safety risk.
- The ability to assess the proposed wind energy areas to further refine appropriate distances between shipping and structures.
- The ability to assess the need to create routing measures to mitigate risk posed by fixed structures.
- Review Pacific Northwest National Laboratory tool.

**Key Milestone / Deliverable Schedule:**

- Assessment of Risk Modeling Tools……………………………………. 30 Aug 18 ✓
- Automatic Identification System Risk Modeling Data Package…..5 Dec 18 ✓
- Creation of an Offshore Energy Risk Assessment Tool……….31 May 19 ✓
- Test Risk Modeling Package……………………………………. 26 Jul 19 ✓
- **Navigational Safety Risk Modeling and Analysis Tool**
  - Summary Report (Model & Report)…………………………………….. 6 Nov 19 ✓
  - Refine Assessment Tool and Methodology ……………….. Aug 20
  - Full-Scale Process Walk-Through……………………………. Aug 20
- **Navigational Safety Risk Modeling and Analysis After Action Report (Report)…………………………………….. Sep 20 ✓
- Project End……………………………………………………………… Sep 20

**Sponsor:** CG-5PW

**Condition-Based Maintenance (CBM) for Coast Guard Asset Product Lines**

**Mission Need:** Targeted CBM for higher asset availability and reduced life cycle costs.

**Project Objectives:**
- Research significant opportunities for using leading indicators and readily available system information to implement condition-based and predictive maintenance activities within the surface and aviation communities.
- Research system characteristics: interfaces, data structure, data analysis, and data display.
- Conduct market research of available commercial and Governmental Off-The-Shelf (GOTS) systems that accommodate identified system characteristics.
- Provide recommendations for systems and steps required to accommodate functional characteristics.
- Work with research partnerships to develop demonstration case studies using predictive maintenance with Coast Guard data.

**Key Milestone / Deliverable Schedule:**
- Project Start: 1 Apr 19
- Surface Asset Maintenance Characteristics Review: 1 Apr 19
- Surface CBM Market Research: 29 Oct 19
- Academic Partnership Engagements: 1 Dec 19
- **CBM for CG Asset Product Lines (Brief):** 14 Feb 20
- Aviation Asset Maintenance Characteristics Review: 15 Feb 20
- Aviation CBM Market Research: Oct 20
- **CBM for CG Asset Product Lines Summary Report (Report):** Sep 21
- Project End: Sep 21

**Sponsor:** CG-45, CG-41

**Stakeholder(s):** SFLC, ALC

**Project #:** 9204

**Anticipated Transition:** Knowledge Product

**Notes:**
- Partner with the CG Surface Forces Logistics Center (SFLC) and Aviation Logistics Center (ALC) to make recommendations.
- Potential partnership with GOTS providers, Naval Postgraduate School, Air Force Institute of Technology, Naval Academy, Massachusetts Institute of Technology, DHS S&T Office of University Programs, and Connecticut National Guard.

**RDC Research Lead:** Ms. Christine Hansen

**CG-926 Domain Lead:** CDR Craig Murray

Maritime Unmanned System Technology (MUST)

Mission Need: Improved U.S. Coast Guard (CG) persistent maritime domain awareness using Autonomous Underwater and Surface Vehicles (AUSV).

### Project Objectives:
- Provided a AUSV platform, study potential employment options for using AUSV to support CG mission areas.
- Explore space, weight, and power requirements.
- Identify possible payloads.
- Conduct single and multiple AUSV evaluations.
- Conduct multiple AUSV swarming evaluations.
- Conduct AUSV and unmanned aerial system teaming evaluations.

### Key Milestone / Deliverable Schedule:

Define and Communicate Exclusion Zones

Mission Need: Capability to physically mark and clearly communicate the boundaries of an area of exclusion, including both fixed and moving security zones.

Project Objectives:
- Review user needs, consider short-term and longer-term solutions.
- Investigate solutions on the market to determine the best possible solutions to evaluate.
- Select and test prototype solution(s) that will unambiguously mark fixed and moving security zones.

Evaluation of Three-Dimensional (3D) Printing Technology for Coast Guard Applications

Mission Need: Assessment of the potential for 3D printers to improve mission readiness by reducing logistical support lead times.

**Project Objectives:**

- Research the advancements made with the spiral development of 3D printing technology with respect to Coast Guard applications.
- Identify CG units that are best suited to implement additive manufacturing, conduct training, and trial 3D printing technologies.
- Research cost, logistical, and performance issues that could be addressed with 3D printing and additive manufacturing.
- Work with Surface Forces Logistics Center and Aviation Logistics Center to develop the required process for approving 3D printed parts for operational use.
- Document findings and provide recommendations for decision makers.

**Key Milestone / Deliverable Schedule:**

- Project Start: 11 Jan 16
- Identify Units for 3D Printing Trial: 23 Feb 16
- Evaluation of 3D Printing Technology for Coast Guard Applications (Report): 26 Apr 17
- Underway Additive Manufacturing Demonstration: 29 Jun 17
- Roadmap for Integration of Additive Manufacturing (Report): 20 Feb 20
- Project End: 20 Feb 20

Safety Parameters for ICE Operations (SPICE Ops)

Mission Need: Technical data for personnel and equipment performance in extreme cold weather during ice operations.

**Project Objectives:**
- Establish exposure limits for Search and Rescue (SAR) team members wearing dry suits while exposed in open air.
- Evaluate the impact of extreme cold on the SAR vest and other electronic equipment to determine degradation values based on environmental conditions.
- Provide safe guidelines and identify risk mitigation strategies for personnel conducting operations on the ice.

Corrosion Control and Monitoring

Mission Need: Research and mitigate corrosion impacts on cutters by increasing mission support efficiencies and reducing costs.

**Project Objectives:**
- Identify and benchmark current U.S. Coast Guard (CG) corrosion mitigation strategies.
- Research the recent advancements in commercial anti-corrosion coating technologies with respect to CG surface fleet applications.
- Coordinate with U.S. Navy and other government/military services to gather their corrosion mitigation strategies.
- Stand up a CG Corrosion Integrated Product Team (IPT) to down-select promising corrosion technologies.
- Based on the research, compile a report and provide recommendations in a Corrosion Roadmap.
- Conduct Limited User Evaluations (LUE) of selected technologies.
- Research CG cutter hull blasting and recoating intervals.
- Research remote buoy corrosion monitoring systems.

Low-Cost MDA Pilot

Mission Need: Improve Maritime Domain Awareness (MDA) in remote areas.

**Project Objectives:**
- Conduct a pilot study/assessment to determine the efficacy of using low-cost commercially available unmanned surface systems, in combination with or on existing fleet platforms, to enhance maritime domain awareness.
- Test technology solutions used by small, remote Pacific Island states and other technologies with little or no logistics funding.
- Utilize industry engagement and technology demonstrations, focus on contractor owned and operated technology.

**Key Milestone / Deliverable Schedule:**
- Project Start: 6 Jun 18
- Issue Request for Information for Industry Engagement: 30 Sep 18
- Issue Request for Proposal for Industry Owned and Operated Solutions: 7 Nov 19
- Award Contract(s): 7 Feb 20
- Low-Cost Maritime Domain Awareness Pilot Study Status Brief: Aug 20
- Field Demonstration Complete: Nov 20

**Bromine-Free Water Purification System**

**Mission Need:** Evaluate newer, less hazardous water purification systems.

---

**Project Objectives:**

- Prepare to install and operate a Bromine-Free Water Purification System (BF-WPS) onboard a U.S. Coast Guard (CG) National Security Cutter based on system advances made by the U.S. Navy.
- Explore potential issues/aspects of transitioning use of BF-WPS to new CG cutters:
  - Identify feasibility of incorporating BF-WPS on various cutter classes.
  - Estimate ownership costs to include procurement, installation/retrofit, operation, and maintenance.
  - Identify potential benefits of utilizing BF-WPS on CG cutters.

FY20 Short Term Analytical Support Efforts

Purpose: Provide short term analytical support to CG decision makers with a means to access quick, inexpensive analyses to investigate a wide range of technology issues relating to current or planned CG operations or procurements. Larger analytical support projects will typically require funding to cover the cost of RDC labor & overhead and other direct costs.
