

# SILC/CEUs race to the FY 2025 finish line, award 110 projects in three weeks

- Program Executive Office Shore (CG-SHORE), the Shore Infrastructure Logistics Center (SILC) and the Coast Guard's six Civil Engineering Units (CEU) combined to **award 110 depot level maintenance projects, a \$60 million investment in the Coast Guard's inventory of facilities and shore infrastructure, over a three-week period!** This is an incredible feat, representing more than 30% of the annual level of depot level maintenance obligations, to achieve in only 15 business days.
- Each project award is a broad team effort and the culmination of many months of design and contracting work, including site investigations, stakeholder engagement, and extensive outreach/coordination with contractors during the proposal process. In addition, many of these projects require planning, real property and environmental support, State Historic Preservation Office consultation, and engagement with other external entities.
- Coast Guard CEUs are also leveraging approximately \$27 million of One Big Beautiful Bill Act funding to support eight critical projects in FY 2025. **Several of these projects have been awarded already, often within a few business days of receiving funds.**
